Method and Apparatus for Unsupervised Training of Natural Language Processing Units

ABSTRACT OF THE DISCLOSURE

5 A method of training a natural language processing unit applies a candidate learning set to at least one component of the natural language unit. The natural language unit is then used to generate a meaning set from a first corpus. A second meaning 10 set is generated from a second corpus using a second natural language unit and the two meaning sets are compared to each other to form a score for the candidate learning set. This score is determine whether to modify the natural language unit based on the candidate learning set. 15
